

KHALID SIYANBOLA

Full Stack Engineer

Ilorin, Kwara State, Nigeria | +234 706 098 5988 | siyanbolagiggs@gmail.com | github.com/siyanbolagiggs1

SUMMARY

Full stack engineer with production experience owning features end to end, from data model to deployed API to UI. Built REST APIs and data schemas across seven Node.js/Express/TypeScript microservices for a live social messaging app, and independently designed a Go/Gin backend plus Next.js frontend for a two sided marketplace, including payments, real time systems, and an AI support assistant. Comfortable across the stack: authentication, schema validation, real time systems, payments integration, and workflow automation. Active open source contributor. Available immediately, full time or contract.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), Go
Backend	Node.js, Express, Go (Gin), RESTful API design, schema-driven contracts, JSON Schema validation (Ajv, Joi, Zod, express-validator)
Frontend	React, Next.js, React Native (Expo), Tailwind CSS, shadcn/ui (Radix), Zustand, React Hook Form
Data & Infra	MongoDB & Mongoose, SQL, Redis, Docker, CI/CD (GitHub Actions)
Auth & Real-time	WebSocket, Socket.io, Server-Sent Events, JWT, OAuth (Google)
Payments	Paystack (Transactions & Transfers APIs), Stripe (Payment Intents, Connect)
AI / LLM	Groq & Gemini APIs (chat completions, embeddings)
Automation	n8n, HubSpot CRM, GoHighLevel, Git & code review, automated testing, production troubleshooting

EXPERIENCE

JustTalk, Full Stack Developer

Omokeshimi Agunbiade

justtalkapp.com

- Built and maintained REST APIs across seven Node.js/Express/TypeScript microservices (auth, identity, casts, messaging, search, subscriptions, shared data models), establishing consistent API contracts and data schemas across services.
- Implemented JWT and Google OAuth authentication, a referral system, and email verification flows with schema based request validation.
- Built real time messaging features with Socket.io, including image, video, and audio upload pipelines using ffmpeg and Google Cloud Storage.
- Contributed to the React Native (Expo) mobile client, including video upload and chat features.
- Coordinated schema changes across services and collaborated with a distributed team using Git feature branches and code review.

Pulse, Full Stack Engineer

Personal project · May 2026 to Present

pulse-murex-five.vercel.app

- Designed and built a two sided marketplace end to end: Next.js/TypeScript frontend, Go/Gin REST API, MongoDB data layer, from schema design to production deploy.
- Built the full Next.js dashboard: role aware navigation, SSE powered live notifications, validated forms with React Hook Form, an admin panel with charts and paginated data tables, and a responsive mobile layout.
- Simplified the data model by merging separate business and promoter roles into a single unified user role, letting any account both fund and complete campaigns, removing real complexity from the permission system.
- Built an influence scoring and fraud detection engine: rule based scoring across follower count, engagement, account age, and history, plus fraud heuristics (duplicate submissions, rate limiting, trust scoring) to price and gate payouts automatically.
- Integrated Paystack's Transactions API for wallet top ups and Transfers API for real bank payouts, including bank account verification and webhook driven settlement.
- Built an AI support assistant using the Groq and Gemini APIs (chat completions plus embeddings for retrieval), delivered over WebSocket; set up Docker, CI/CD, and production deployment across Railway and Vercel.

expendit, Open Source Contributor

cuesoftinc

github.com/cuesoftinc/expendit

- Built an AI powered financial document processing and transaction insights feature.
- Added Google Sign-In and schema based input/password validation on registration.
- Fixed Docker port mapping and CORS credentials conflicts, expense CRUD bugs, and a JWT duplicate token issue.
- Replaced hardcoded URLs and SMTP settings with configurable environment variables.
